

StealthAUDIT[®] MANAGEMENT PLATFORM

IT infrastructure, data, and applications auditing:
on-premises and in the cloud

stealthbits

StealthAUDIT - Answers for all your questions

Stealthbits' StealthAUDIT Management Platform helps organizations collect and analyze the data they need to answer their most difficult questions in the management and security of their critical IT infrastructure, data, and applications. Unlike point-products designed to address only a single need, StealthAUDIT is a true framework. With preconfigured solutions to address your most common requirements, as well as an extensive toolset for you to create solutions of your own, StealthAUDIT remains relevant even when your requirements change.

Script-like flexibility, without the scripts

StealthAUDIT enables organizations to automate manual and repeatable tasks, create interoperability between systems and processes, interact with end-users, and create the efficiencies that afford organizations the time to be visionary, rather than reactionary.

Lightweight and scalable

Regardless of the scenario, StealthAUDIT employs best-of-breed approaches for gathering data that make simple work of otherwise tall tasks. Broad or highly specific, StealthAUDIT's underlying, agentless architecture scales to the world's largest, most complex infrastructures, while still remaining lightweight and nonintrusive to other system, application, and network activities.

Problem solving...embedded

Solving any problem involves the same four steps:

- **Step 1:** Collect appropriate data
- **Step 2:** Analyze collected data to obtain meaningful information
- **Step 3:** Determine the best course of action based on the information obtained
- **Step 4:** Remediate and measure your results

The StealthAUDIT Management Platform enables you to easily retrieve the data you need, analyze it, implement automated or programmatic workflows and remedies, and report upon your status using the most appropriate method aligning to the various audiences you'll interact with.

Data collection

StealthAUDIT contains over 30 built-in data collection modules covering both on-premises and cloud-based platforms from Operating Systems to Office 365. Each "Data Collector" provides an easy, wizard-driven interface for configuring StealthAUDIT to collect exactly the data you need, enabling fast, light-weight data collection from dozens of data sources.

Workflow & remediation

StealthAUDIT's Action Module framework serves as both a means by which to communicate with and receive feedback from end users, as well as automatically or programmatically remediate conditions across your organization. Fix excessive access, clean-up stale data, feed ticketing systems, and tie processes together seamlessly with StealthAUDIT's open, flexible action facilities.

Data analysis

StealthAUDIT Analysis Modules allow you to analyze your data in every way possible, including correlation with other data sources, easy-to-use view report creation, historical trending, injection of business rules and logic, notification, and more. Users can also extend analysis with powerful SQL and PowerShell modules, as well as alternative script inputs and outputs.

Reporting

StealthAUDIT provides multiple ways to interact with your collected and analyzed data, including report generation and distribution. Beautiful HTML5 renderings of any scenario make understanding your environment simple for users at any level of your business, on virtually any device.

Platform support

The StealthAUDIT Management Platform ships with preconfigured "Solution Sets" designed to address key concepts in the security and administration of critical systems, data repositories, and applications within your IT infrastructure. In-depth focus is provided around Active Directory, unstructured and structured data repositories like network file shares, SharePoint, and databases, Windows, Unix, and Linux Operating Systems, and more.

Directory services support

Active Directory

Azure Active Directory

LDAP

File system support

Windows

NetApp

EMC Isilon

EMC Celerra

EMC VNX/VNXe

EMC VMAX3

Hitachi NAS

Unix

Linux

Nasuni

Applications & database support

SharePoint

Exchange

Microsoft IIS

Microsoft SQL Server

Oracle

ODBC-Compliant Databases

Azure SQL

Cloud support

SharePoint Online

OneDrive for Business

Exchange Online

Dropbox

Box

AWS S3

Operating system support

Windows

UNIX

Linux

Key features & benefits

- **Preconfigured Solution Sets** – StealthAUDIT contains out-of-the-box, ready to run Solution Sets aligning to Data Access Governance for Unstructured and Structured Data, Active Directory Management and Security, OS-level Auditing and Governance, and more.
- **Process Automation** – StealthAUDIT seamlessly ties together disparate processes, creating fully automated solutions that save time, avoid unnecessary costs, and alleviate burden on IT.
- **Governance** – Not all the data you need can be obtained from a system or application. StealthAUDIT provides both simple and sophisticated methods of retrieving and incorporating end-user feedback into the data analysis and decision-making process, including Entitlement Reviews, Self-Service Access Requests, and more.
- **Technology Integration** – StealthAUDIT can push and pull data to and from dozens of technologies (including home-grown systems) to enhance the value of existing and future technology investments.
- **Consolidated Reporting** – StealthAUDIT can report on any available dataset, enabling organizations to view all of their reports in a single pane of glass.

Conclusion

The StealthAUDIT Management Platform enables organizations to reduce risk, fulfill and enforce compliance requirements, and reduce operational costs associated with the management and security of their critical systems, data, and applications. StealthAUDIT's combination of preconfigured solutions and the flexibility for users to create and configure their own, results in the perfect mix of usability and capability for today's enterprises. IT professionals that can effectively safeguard their organizations while remaining flexible and efficient will achieve the competitive edge, and StealthAUDIT will help them do just that.
